

"Syphilis is easily curable in its early stages. The initial symptom is a chancre, a painless open sore that usually appears around or in the vagina. If untreated, it can lead to serious long-term complications, including problems of the heart and central nervous system, organ damage and even death. Congenital syphilis can cause stillbirth, death soon after birth, and physical deformity and neurological complications in children who survive. The full course of the disease can take years. Penicillin remains the most effective drug in the treatment of syphilis."

Death or debt

But if you're asking my opinion, I would argue that a social justice approach should be central to medicine and utilized to be central to public health. This could be very simple: the well should take care of the sick."

The root of all health is in the brain. The trunk of it is in emotion. The branches and leaves are the body. The flower of health blooms when all parts work together. ~Kurdish Saying

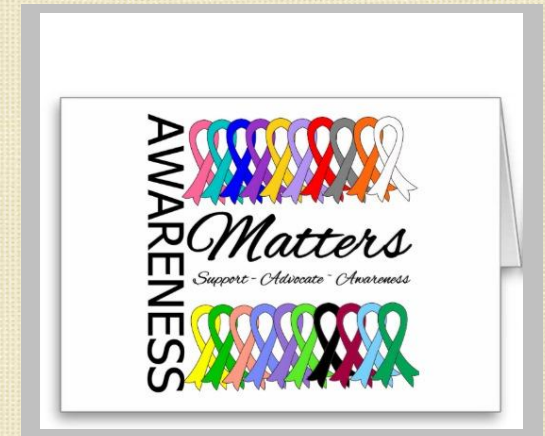

WHAT ARE YOUR POINTS?

- The first point discussed would be highlighting how important it is to visit a professional doctor for a general check up. Many preventable illnesses can be caught on time for survival. There are many stories of people who suffer with cancer, organ failure, or sexual transmitted diseases who could've survived if only they'd gotten a check up earlier in time before any spreading had occurred.
- My second point would be how getting medical health is financially convenient; to avoid feeling from the Obama care or high medical bills that'd have to be paid off from your own pocket.
- My third point would be a brief list of clinics that are of low cost for people in the Chicago area to visit.
